

Problem Statement : AI Interview Coach/ Trainer

The Challenge: Many students and job seekers struggle to perform well in interviews due to a lack of practice, personalized feedback, and confidence. Traditional interview preparation methods often provide static questions without evaluating the candidate's responses or identifying areas for improvement. As a result, candidates find it difficult to assess their readiness for real-world HR and technical interviews.

The Objective

Build an AI-powered Interview Coach that helps users prepare for job interviews through interactive mock interview sessions, AI-generated feedback, resume analysis, and performance tracking. The solution should include:

- Generate common HR interview questions and evaluate user responses. Technical Interview Practice
- Conduct role-specific technical interviews with relevant questions. Mixed Interview Mode
- Combine HR and technical questions to simulate a real interview experience. Resume Upload & Analysis
- Allow users to upload their resume and personalize interview questions based on their skills. AI Feedback & Scoring
- Evaluate responses and provide scores, strengths, weaknesses, and improvement suggestions. Performance Dashboard
- Display interview statistics, scores, completed sessions, and readiness level. Progress Analytics
- Track user performance over multiple interview sessions using visual analytics. Secure User Authentication
- Enable users to register, log in, and securely access their interview history. IBM watsonx.ai Integration
- Use IBM watsonx.ai (Granite Model) to generate intelligent interview questions and AI-powered feedback.
